

Welcome to Git for coursework

In coursework and delivery, you will live in Git

Why Git matters

- A submission others can reproduce
- Later labs, Make, simulators
- Getting comfortable here pays off in every later course

Two tracks, one idea

- Every lab module offers two ways to practice
- Remotes feel real
- The browser lab track uses interactive tools on the learning platform
- You may do either track, or both
- The usual rhythm is browser first for the idea, then real Git for muscle memory

Set up the real Git track

- Open a terminal
- On Windows, prefer WSL, Windows Subsystem for Linux, so you get a real Unix shell with Git
- Confirm Git is installed by asking for its version
- From the learn Git course folder, run the scaffold script once
- It does not install course tools
- Skim the sandbox note once, you will use a live practice repo later in the path

Set up the browser lab track

TOOLS

Interactive labs

Concept labs in the browser — organized by idea, not by course or module. Shipped tools are ready to use; planned tools show **COMING SOON** until they ship. Catalog: **195 shipped, 7 planned** (see [tools.md](#)). Target courses: [syllabus.md](#).

Shell & filesystem

Virtual filesystem terminal

pwd, ls, mkdir, cp/mv/rm · 22 challenges

Permissions, umask, PATH & ownership

rw·x · umask · PATH · 22 challenges

Shell history & reverse-search

history · Ctrl+R · !! / !n / !\$ · 22 challenges

Absolute vs relative paths

Tools index

How to move through modules

- For each module
- When you finish this intro checklist, continue to the first lab module
