

Branch naming

Branches let you isolate work, a lab feature, a bugfix, a submission, without destabilizing main

Prefix, slug, then branch

- Use a typed prefix
- Branch from main after you have fetched the latest tip, not from random work in progress
- One concern per branch keeps reviews and merges readable

INTERACTIVE TOOL

Branch naming strategy

Practice feature/, fix/, and friends — validate names, pick the right prefix, and always branch from an updated main.

Starter example: Name branches like feature/alu-mul — lowercase, kebab-case, typed prefix — and create them from an updated main.

Prefixes

feature/
New capability / RTL feature

fix/
Bug fix (non-urgent)

hotfix/
Urgent production fix

docs/
Docs / comments only

chore/
Build, CI, tooling

test/
TB / coverage only

- Pattern: prefix/short-kebab-description
- Lowercase only: use - not spaces or

Branch naming lab starter

learn_git — branch strategy

Real Git practice

```
wsl - module09-branch-strategy/examples/branching

# Track A - real Unix
# real shell session (Track A)
# practice repo: /tmp/git-br-l1lcXQ

$ git init

$ echo "v1" > notes.md

$ git add notes.md

$ git commit -m "Add notes"

$ git branch -M main

$ git branch
* main

$ git checkout -b feature/readme-update

$ echo "feature edit" >> notes.md

$ git add notes.md

$ git commit -m "Update notes on feature branch"

$ git checkout main

$ git log --oneline --all
5ecd3dd Update notes on feature branch
5e3dd97 Add notes
```

Real shell — create and switch branches

Real Git practice — try these

```
# git init — create a new repository here  
git init
```

```
# echo ... > notes.md — create and commit on main  
echo "v1" > notes.md
```

```
git add notes.md
```

```
git commit -m "Add notes"
```

```
# git branch -M main — name the default branch main  
git branch -M main
```

```
# git branch — list branches; star marks current  
git branch
```

Pitfalls to watch

- Do not use spaces or vague names like my branch
- Do not branch from a stale main when the team expects you to fetch first
- Delete merged feature branches so the list stays short
- And remember

Your turn

- Complete the checklist for at least one track, preferably both
- In the browser, load the starter and fix a few weak branch names until validation passes
- On real Git, create a feature branch, commit once, and switch back to main
- When you are ready
