

PR review checklist

A pull request is more than a merge button, it is a review conversation

Size, tests, hygiene, description

- Keep each PR to one concern so reviewers can hold the change in their head
- RTL or testbench edits should mention how you verified
- Hygiene means no wave dumps
- The description should explain what changed and how a reviewer can reproduce your result
- Approve when all four pass, comment for nits or missing context

INTERACTIVE TOOL

PR review checklist

Review chip PRs for **size**, **tests**, and **diff hygiene** — then choose approve, comment, or request changes.

Starter example: Walk PRs 1–8. Tick checklist items that pass, then choose **approve**, **comment**, or **request changes**.

Idle

Quiz: pillars

Quiz: approve

Quiz: changes

Approve good PR

Block mega-diff

Block no tests

Block artifacts

Approve CI pin

Comment weak desc

Block secret

Draft comment

Quiz: size

Quiz: vcd

Quiz: comment

Five correct

All eight

Quiz: split

Untick hygiene

Quiz: tone

Starter PR1

Quiz: evidence

Secret again

Review pillars

Size

One concern; small enough to hold in your head.

Tests

Sim/TB/CI evidence for RTL or TB changes.

Hygiene

No *.vcd/build//secrets; on-topic paths.

learn_git — pr review lab

Real Git practice

```
wsl - module17-pr-review-lab/examples/tean_workflow

# Track A - real Unix
# real shell session (Track A)
# practice repo: /tmp/git-pr-SipAo5

$ git init

$ echo "v1" > README.md

$ git add README.md

$ git commit -m "init"

$ git branch -M main

$ git checkout -b feature/readme-update

$ echo "feature note" >> README.md

$ git add README.md

$ git commit -m "feature: update README"

$ git log main..HEAD --oneline
b1844ae feature: update README

$ git diff main...HEAD
diff --git a/README.md b/README.md

$ git checkout main

$ git merge feature/readme-update

$ git log --oneline -3
88f98b5 address review: clarify README
b1844ae feature: update README
8a7ef0e init
```

Real shell — review a feature branch diff

Real Git practice — try these

```
# git init — create a new repository here  
git init
```

```
# echo ... > README.md — first commit on main  
echo "v1" > README.md
```

```
git add README.md
```

```
git commit -m "init"
```

```
# git branch -M main — name the default branch main  
git branch -M main
```

```
# git checkout -b feature/readme-update — branch for the PR  
git checkout -b feature/readme-update
```

Pitfalls to watch

- Do not approve mega-diffs that mix refactor with feature work, ask for a split
- Never merge secrets or generated waves even if the RTL change is correct
- A thin description on a risky fix deserves request changes, not a silent approve
- Draft or work-in-progress PRs get light comments, not the same bar as ready-to-merge
- And remember

Your turn

- Complete the checklist for at least one track, preferably both
- In the browser, load the starter and practice approve versus request changes on a few PRs
- On real Git, review a branch with log and diff before merging
- When you are ready
